BEDRIJFSOMSCHRIJVING

I. Clear2Pay is an innovative payments technology company focused on delivering globally applicable solutions for secure, timely and streamlined payments processing. Clear2Pay's Open Payment Framework (OPF) enables financial institutions to improve internal payments processing efficiencies whilst at the same time providing their clients with better payment services that are faster, with richer payments related information.

Clear2Pay's solutions within the Service- Oriented Architecture (SOA) based Open Payment Framework offer financial institutions the ability to process payments through a centralised payments engine that utilises a library of re-useable business services across all payment types. The bank can thus combine new services models with existing infrastructures, thereby protecting previous investments whilst gradually moving to a more modern efficient payments environment.

II. SmartFin Capital is an anti-cyclical and long-term oriented investment vehicle managed by a strong team that combines financial, operational and entrepreneurial experience supporting its portfolio companies in their growth ambitions. We provide replacement and expansion capital to European companies that display the potential for significant value creation in fast growing market segments in. We believe in building successful companies rather than setting up financially engineered transactions. We also look for opportunities where other investors hesitate to go, refusing pigeonholing that would limit our flexibility

III. EGGSPLORE

ARE YOU READY FOR THE ECOSYSTEM ECONOMY?

In the next decade digital mega-trends will have an enormous impact on the financial services industries. This creates opportunities for both established actors as well as the new technology start-ups. We do not believe the future is one in which a new generation of players will wipe out the existing financial services sector. We do believe banks and other financial players will have to adapt rapidly to the new digital reality. Customers are increasingly demanding real-time services that are much broader than what they are currently being offered. In the future financial services organizations will have to master the art of co-creation and collaboration with agile technology start-ups and offer customer experiences that are comparable with those customers are receiving from data-driven technology companies in other domains.
